This semester has been a collection of experiences that helped me understand how much learning happens beyond the classroom. From working on hackathon projects and completing a Data Science internship to exploring certifications, practical activities, and hands-on experiences at university, I have had opportunities to learn by actually doing, making mistakes, asking questions, and working with others. Looking back, the biggest lesson for me has been that consistent participation and curiosity can turn even unfamiliar experiences into something valuable.

[Varish Peya](#) Thank you! One unexpected insight we discovered was that the hardest part wasn't building individual features, but making all the different components work together as one reliable end-to-end system. Connecting the frontend, Flask APIs, MySQL database, role-based access, scoring, and pilot workflow showed us how important system architecture, database design, API consistency, and validation... more
